JC4	39°18'10.20"N	105° 3'50.76"W	Tributary of Jackson Cr. in Pike NF				
WPC4	39°20'50.67"N	104°58'15.65"W	W. Plum Cr. at Jackson Creek Rd				

## **Main Findings**

- At WPC4 Total Coliform decreased by over 57% and *E. coli* increased by 260% since 2022
- At JC2 Total Coliform decreased by 99.8% and E. coli decreased by 95% since 2022
- Jackson Creek contributes 33% of flow in W. Plum Creek but does not substantially impact the COC loading
  - Concentrations at JC1 were lower than those at WPC4 for all parameters (except NO<sub>3</sub><sup>-</sup>) indicating the COCs are not coming from Jackson Creek
- Thallium likely coming from weathered granite, sequestered in clay soils
  - o Mobilized during wet seasons
- Nitrogen levels exceed standards in Proposed Regulation 38 at JC1, JC2, and WPC4
  - Increased risk of algal blooms
- As and Se concentration were below detection level for all sites except at JC4 where Se exceeded Proposed Regulation 38 standards
